Nodemon Cheatsheet

📈 2004   6 years ago

Nodemon helps NodeJS applications to restart on file changes

Installation

```
npm install -g nodemon
```

Installing as development dependency, specific to project

```
npm install --save-dev nodemon
```

Starting application with nodemon

If you are doing `node index.js` to start your NodeJS application, then start doing the following to start with Nodemon

```
nodemon index.js
```

Monitoring multiple directories

By default Nodemon monitors current working directory, If you want override that behaviour with your specific directories, you can do the following

```
nodemon --watch server --watch docs --watch client server/index.js
```

In this case Nodemon watches `./server` , `./docs` . `./client` folders
